

## Lightly Annotated Excerpts from Electric Angel's Trilogy: 7 Keys to V2k, The Truth Will Set You Free & The Radiohead Protocol

Formerly at sabotaged free-targeted-individuals.com:

- Book 1: *7 Keys to V2k*
- Book 2: *The Truth Will Set You Free*
- Book 3: *The Radiohead Protocol* (at Amazon)

You must buy her books to fully appreciate the material.  
Lightly annotated excerpts with emphases added:

### Book 1

#### **“Key #1: V2K uses the facial nervous system”** —

Patent excerpt: “Although the normal facility for hearing in the human body is the above described system, which may be referred to as the ear system, there is present in the human body a second, dormant system, referred to herein as the facial system, which, if properly energized, will effect the transmission of signals to appropriate areas of the brain, sometimes referred to herein as auditory centers, to give rise to sensations of sound. The facial system, although coupled to the organ of Corti, is substantially parallel to the normal ear system....

**piezoelectricity** was discovered in 1880 by the Curie brothers, Jacques and Pierre, who found that, by applying mechanical stress to crystals such as tourmaline, topaz, quartz, cane sugar and Rochelle salt, an electrical charge would be generated at the voltage proportional to the mechanical stress applied.... the piezoelectric effect occurs only in non-conductive materials (non-metal), in two main groups, namely crystals and ceramics, the most famous of these (and most widely-used) being crystal quarts. Interestingly, certain *biological* matter, such as bone, DNA and proteins, are also piezoelectric.”

#### **“Key #2: V2K uses piezoelectrical material”**

“By unwittingly ingesting or interacting with materials such as **barium**, you can turn into a walking antenna for all kinds of suspect signals.”

“In short, piezoelectric material coupled to the facial nerve is at the center of this [V2k or microwave audio] invention, facilitating the fake hearing process.”

“The fact that the bone of the skull is not a piezoelectric conductor, nor a conductor of electricity, means that the

term Voice-to-skull is inaccurate. The non-conduction of bone material is thus the fifth key to V2k.”

“[W]henever you claim you are being harassed by RF, no one believes you, yet it is not only possible, but documented in the inventor’s own patent!” Patent excerpt: “for receiving radio signals from a remote source and retransmitting the information, usually on a different carrier frequency, to the detector unit”.

“It’s almost like Puharich is foretelling the advent of cellular technology, or more specifically, the mass rollout of microwave towers, fabricated and installed on the landscape from coast to coast among every nation on every continent; a means to facilitate his invention on a massive scale.”

Was cell phone infrastructure primarily for covert abuse?

“I find it chillingly coincidental that this very patent, number 3267931, is all about readying the device for mass application, and that, in the coming years, its mass application capabilities would meet the mass rollout of microwave towers, forming a formidable and frightening technological confluence.”

#### **“Key #7: V2K is transmitted long-range”**

“He says that the feedback coupling may be established on various parts of the body but the input coupling should be made with the nerves of the facial system, particularly in the areas of the neck, face and scalp, innervated by the trigeminal, facial and cervical nerves (nerves of the spine in the neck area).”

#### **What V2k means**

In “a now-defunct website, the US Army... defines Voice-to-skull as follows:

‘Nonlethal weapon which includes (1) a neuro-electromagnetic device which uses microwave transmission of sound into the skull of persons or animals by way of pulse-modulated microwave radiation; and (2) a silent sound device which can transmit sound into the skull of person or animals.’

While acknowledging directed audio, at least in such publications “the US military never really understood what this technology is all about”.

“What does V2k actually mean? The ‘V2’ in V2k has to do with **the V2 or maxillary nerve**, which is part of the facial nervous system. The ‘2’ is sometimes expressed in subscript, as seen in the explanation below. Let’s go to Wikipedia for a quick lesson in facial anatomy:

“The maxillary nerve (V2) is one of the three branches of the trigeminal nerve, the fifth cranial nerve. It comprises the principal functions of sensation from the maxillary, nasal cavity, sinuses, the palate and subsequently that of the mid-face.... Its function is the transmission of sensory fibers from the maxillary teeth, the skin between the palpebral fissure and the mouth, and from the nasal cavity and sinuses.”

“This area, as you will remember from the first patent, is the area that was of most interest to Puharich.”

Editor’s note: you may see targeted individuals (TIs) with burn marks in this area, which can reflect piezoelectric spray chemically deposited, seared in as by maser.

**“The ‘k’ in V2k, usually expressed in lowercase, is for ‘coupling coefficient’. The piezoelectric coupling coefficient/factor (k) is a measure of the capability of a piezoelectric material to convert mechanical energy to electrical energy....**

**“Thus, if we combine ‘V2’ and ‘k’, and incorporate the appropriate subscript, we now have V2k and a brand-new definition of so-called Voice-to-skull, which includes the victim’s maxillary nerve and the presence of piezoelectric material. For more information on this, read The Truth Will Set You Free.”**

Editor’s note: the US Air Force/CIA funded V2k patents inventor Henry K. Puharich, withheld hearing solutions to weaponize it, and oversaw targeted individuals being maligned by covert agencies and unscrupulous psychiatrists, misdiagnosed with schizophrenia over 70 years, amid overseeing chemical warfare, including the

EPA-designated carcinogen chromium and **neurotoxin barium** (“ten thousand times more toxic to your nervous system than lead” per a doctor for pilots who sprayed it out of Peterson Air Force Base), easing assault with directed energy weapons (DEW) and chemical deposit (searing) of barium into our faces for frequency and audio violation by carrier waves in our homes. “This, according to Puharich’s resume, ‘resulted in the development of electronic systems that rehabilitate hearing in the clinically totally deaf.’” Instead, the US Air Force, NSA, CIA, FBI, DHS and criminal psychiatric industry only weaponized the technology, expected from morally bankrupt institutions of domestic terrorism.

### Book 2

**Target individual must be antenna.** “It is clear, at least to me, that the targeted individual must express antenna-like properties in order to receive the perpetrators’ signal. Furthermore, the antenna-like property must be stable, to facilitate the constant, sometimes 24/7 barrage....”

**Nanotechnology is the key.** “The nanotechnology is the single most important component of electronic harassment” insofar as larger surgical implants can be removed. Spraying toxic nanotechnology measured to include barium, found by among targeted individuals to pass through HEPA filters, the treasonous US Air Force is front and center in treason and enabling covert torture.

**Pieces in place by 1975.** “Indeed, the mid-70s seems significant in the melee of events concerning electronic harassment. In 1974, Dr Joseph C Sharp of the Walter Reed Army Institute of Research demonstrated the first unclassified experiment with Voice-to-skull. In the very same year, thin-film deposition technology was patented. These could be two very compelling reasons why electronic harassment emerged within the next year as a threat to the community. In effect, the transmission information was declassified in the same year that the entrainment technology was patented.”

**PECVD:** “Plasma-enhanced chemical vapor deposition (PECVD) is identified as the leading contestant of the various sub-categories for one important reason alone. And this is because the PECVD process can be done mostly at room temperature or temperatures approaching

room temperature. This, as you can imagine, is important in the extreme; the key to entraining a candidate targeted individual in their natural habitat and environment.... The question is thus; can the combination of plasma and vapor breach two walls, plus the skin and skull of the targeted individual? The answer is yes, it can. Provided the vapor/plasma is properly guided, the energetic species **can penetrate brick, mortar, skin and bone.**”

“Remote Plasma-Enhanced Chemical Vapor Deposition (**RPECVD**)” and “remote high-density plasma-enhanced chemical vapor deposition (**RHDPECVD**)” can be made possible by a number of initiation processes. These are radio frequency (RF), microwave (MW) and a configuration of radio frequency and microwave (MWRf), or so-called ‘dual-frequency.’”

**PECVD by MASER:** “So how does the vapor/plasma travel? The answer to this is a maser.”

Diamond-shaped ceramics in TI heads: “at the nanoscale, **ceramics have a diamond cubic structure.** I remember my perpetrator once told me that my head was ‘**filled with diamonds**’. In fact, he reiterated this. The second time, he said something like, ‘no, really; I filled your head with diamonds!’ In retrospect, I believe it was a reference to the structure of the nanomaterial used in the entrainment. My perpetrator, who is a true disciple of Puharich and the one called Tesla, seemed in awe of the idea, and advanced technology in general.”

Material permanent: “It’s an unpleasant task, at least to me, to report that the half-life for silicon is 170 years. Even if the half-life was to be considerably shortened by the polymerization process or other syntheses, it still indicates that the entrainment is supposed to be permanent. Once entrained, the targeted individual is electronically harassed or open to harassment for life.”

### “Conclusion & Summary (p. 29)

“In order for the targeted individual to be harassed, he or she must express an antenna-like property, without which electronic harassment cannot take place. We have learned that electronic harassment has two vital components, namely harassment and entrainment. For the targeted individual to be put

through a harassment routine, he or she first needs to undergo a covert entrainment process. The entrainment amounts to implanting the targeted individual with semiconductor material, by means of a form of nanotechnology called thin-film deposition.

“From the vast scope of thin-film deposition technologies, we isolated chemical vapor deposition (CVD) as our most likely method of entrainment. We learned that CVD conforms to the criteria of stealth and is invisible to the eye. In CVD, a gas-form precursor turns into a solid on contact with the substrate, in a phase transition deposition process. We further refined our focus to plasma-enhanced chemical vapor deposition (PECVD), mainly due to the fact that it can be actuated at temperatures approaching room temperature. We viewed a ‘mini’ PECVD machine for confirmation of portability.”

“Furthermore, we have learned that remote high-density plasma-enhanced chemical vapor deposition (RHDPECVD) is used to further reduce the deposition temperature. We know that the deposition can be made possible by radio frequency (RF) and microwave (MW) or a combination of the two (dual-frequency) that results in the highest deposition rate in the shortest possible time.

“In our theoretical model of entrainment, we looked into how the ionized plasma and vapor could be transported from the perpetrators to the target and discovered it is done with a maser or maser-like device that transports the ionized material by coherent radiation.

“We turned our attention to the actual implant and learned that it is a polymerized device in the shape of a helix. We discovered that there are possibly thousands of polymer helices deposited on the substrate, or neural tissue, of the targeted individual. We furthermore learned that the material used could be a ceramic such as silicon, etc, or a biopolymer such as pyrrole.

“Finally, we examined the evidence for in-situ deposition, and discovered that scientists are doing

legitimate research on polymerized implants. Using the ‘bottom-up’ approach to assembly, the scientists apply the monomer precursor to the tissue, where it assembles into a solid in-situ. The scientific interest in this field of study confirms that what the perpetrators are doing, can be done.”

Chapter 2: “Henry Puharich makes it clear in his first patent in the hearing series, Means for Aiding Hearing, that the whole concept of Voice-to-skull is based on energizing the facial nervous system by electrostimulation. Puharich refers to the facial nervous system as a ‘dormant’ hearing system; a system of hearing that’s parallel to the ear-hearing system.”

“It is worth mentioning here, too, that the optic nerve is also heavily populated with polymer helices, hence the pressure, strain and discomfort so often reported by targeted individuals. In fact, **the left eye appears to be significantly implicated in the entrainment.** This is in line with the fact that the left-hand side of the face and head, in general, is more heavily populated with polymer architecture than the right-hand side.”

She suggests: “Once the polymer helices fall off the area represented by the three dots, the V2k effectively ends because no more memory harvesting can take place.”

**Emotional manipulation damages the amygdala, responsible for memory, destroying part of the brain:** “emotional-control has to do with manipulating the amygdala. As the amygdalae are easily damaged, I could be suffering from permanent damage from which I will never fully recover. The second reason is that the amygdala is associated with memory. If the amygdala is damaged, memory is thus impaired.”

**Emotional control:** “Those who suffer from emocon will benefit from knowing where the polymer helices are situated. The amygdala are closely associated with the olfactory bulb and nerves, thus the polymer helices can be found **between the eyes and around the nasal area.**”

**Motor/movement control:** “Those under the influence of bodycon have a proliferation of polymer helices on the crown of the head”.

**V2k control:** “I noticed a configuration of polymer helices on the frontal lobe and amygdala that appeared to be responsible for the V2k.”

**Measure RF in mouth:** “instead of measuring around your head, extend the antenna and place it inside your mouth. This intra-oral check is very important, because the mouth is an important entry point of the radio signal. Puharich the old git tells us so in his first patent. Be sure not to touch the antenna to any part of the mouth, as this will cause an unnatural reading. The reading should be taken while the antenna is in the centre of the oral cavity. If you have a decent meter, you should be able to ‘pick up’ the perpetrators’ radio frequency thus.

**Using isochronic tones:** “For diagnostic purposes, I have selected a superb tone for your disentrainment pleasure. The tone is called anti-mind-control (more commonly used for its **anti-jetlag effect**) because the frequency used in the tone fortifies the listener against mind-control. Download the tone and copy it to the MP3 player. Now, while you are listening to the isochronic tone for the diagnostic test, you must concentrate.... Set the volume as loud as possible for your comfort.... Now, you must ascertain whether you feel any physical sensations in your cranium while the tone is playing. Ordinary people — those without polymer helices — do not experience any physical sensations while listening to isochronic tones.

“The isochronic tone, which is around 20 minutes long, will access various areas of the brain and nervous system automatically — a kind of sonic probe, if you like. If the frequency encounters any helical clusters on the nervous system, you will experience the sensation of pressure in that area of the brain. As the isochronic tone frequency ‘moves around’ in the brain, stimulating brain tissue and nerve, it will pinpoint the areas of the nervous system especially afflicted by a proliferation of helices, by translating this into a feeling of pressure.”

**“Step 1: destabilize the polymer helices with electromagnetic energy: make a neurofeedback therapy appointment. Make an appointment to see a LENS neurofeedback therapist.... as soon as possible.**

For a list of practitioners, refer to the Ochs Labs website at <https://www.site.ochslabs.com/about1-c1b01....>

“There are two types of neurofeedback, namely Traditional and Low Energy Neurofeedback System (LENS). We are interested in LENS, because the treatment does not require any special interaction from the user, except to close their eyes when requested....”

“LENS works by imparting a weak electromagnetic field into the cranium, at the site on which the practitioner places the electrode. During each visit, the practitioner selects a number of different sites and places the electrode on the head, effectively stimulating each site with electromagnetic energy....”

“When the polymer helices come into contact with the electromagnetic fields, they start to become **destabilized.**”

“Step 1 of GEM therefore lays the groundwork that’s needed for the removal of the parasitic helices by effectively undermining them through the application of a friendly electromagnetic frequency.”

“Sessions typically take place once a week. For your treatment during the Grid Exit Method, you must plan to return for a period of **13 consecutive weeks** for the initial electromagnetic destabilization to take place. Thirteen weeks is construed as two weeks of brain-mapping, followed by 11 sessions of electromagnetic stimulation. After 13 weeks, you will pause to assess your progress, and decide whether to continue with LENS treatment, along with the other treatments still to be covered in the Grid Exit Method. If followed correctly, the LENS neurofeedback therapy **should destabilize the helices in seven to 13 weeks....** From the brain-map, the practitioner will determine which sites are hyperreactive, integrated and suppressed. Although the polymer helices are to be found everywhere, **the helix infestations are worst at the suppressed sites.**”

“Directly after each LENS session, you might feel really tired. Then for the next two days, you may feel really bad psychologically. You may wonder if it’s all worth it. But a few days later, you will feel noticeably better than before the LENS session. The pattern continued thus:

feeling worse after LENS only to feel better a few days later, until there is a cumulative effect of improvement, amounting to increased personal strength, resistance, resolve, activity, control and clarity, etc."

"From week three to 13, you will continue to visit the LENS practitioner on a weekly basis. During this time, you must be diligent and exercise patience; realize that the entrainment cannot be cured overnight. However, in the weeks it takes to disentrain, you will not sit idly by. Concurrently to the LENS therapy, you will also practice audio disentrainment, which will be discussed" next.

### "Step 2: Use Isochronic Tones"

"1.... You will need internet access and downloading facilities and an MP3 player." "2. There is a website called **Iso-tones.com** where the webmaster has made a significant number of isochronic tones available to the public free of charge. Visit the website immediately and bookmark" it; "3. Read the website; read everything on it. This will give you a better idea of what isochronic tones are all about. Then download all of the isochronic tones onto your PC and transfer them to your MP3 player. Download as many isochronic tones as you can." "4. **Listen to them twice a day.** In the morning, listen to six different tones for about ten minutes each. At night, listen to six different tones for about ten minutes each. **It is important to mix the tones.** Do not listen to the same tone twice, as the objective here is to listen to as many different frequencies as possible. 5. Do not overdo it — around two hours per day should suffice, or as long as you feel comfortable doing so. A one-hour session in the morning and a one-hour session at night will be perfect." "Start using them immediately. How long will you need to use the isochronic tones? **Plan to use the tones for up to a year.** For the first three months of entrainment you will use them almost daily. Thereafter, you might use them more sporadically such as a few times per week, or strategically, to remove the polymer in specific areas."

"If you introduce your own sine wave into the cranium, in the form of an isochronic tone, each pulse of the sine wave constitutes a vibration. Now, as we already know, the **material used in the polymerization process is piezoelectric. Thus, the helices respond to the pulses,**

or vibrations, attempting to convert the vibrations into electrical impulses. But the helices become destabilized in the process instead. The objective of step 2 is therefore to destroy the helices on a piezoelectric level."

Conjecture: "A secondary, but no less compelling purpose for using the isochronic tones, especially at the early stage of disentrainment is because the tones make you feel refreshed. After you have listened to an assortment of tones, you will notice that you feel more energized; remarkably you might feel better than you have since the stalking commenced. This may be so because the tones stimulate all the neural tissue. It occurs to me that the brain goes into a state of, for want of a better expression, pseudo atrophy, when entrained by the polymer helix. The brain is held in unnatural stasis by the presence of the polymer helices and is structurally oppressed. So, when you provide audio stimulation, the brain benefits from better blood circulation and improved physical function."

**"The isochronic tones that are particularly effective at removing the antenna are cell health, DNA stimulation and repair, healing, chakra balancing and ESP."** "In order to vanquish the harvesting mechanism, you must use isochronic tones that stimulate the intellect, recall, and most importantly, emotion. **Tones that stimulate emotion are purple and purple 2. Tones for intellectual stimulation and memory are IQ increase and the three mental performance tones.**" (p48)

"Many of the 'executive control' functions are located in the frontal lobe. Thus, in selecting isochronic tones to destabilize helices in this area, you will select them according to the functions that are impaired. You will select, for example, tones that stimulate creativity, intelligence, confidence, focus and motivation, etc. Try **IQ increase, mental performance, creativity, scout and manifestation.**" "Other tones that are excellent for the frontal lobe include **neuron synchronization and euphoria.**"

"It's also useful to note that mindcon has much to do with oppressing the subconscious mind and channeling sub-vocalized thoughts. It is thus beneficial to use tones

that stimulate the subconscious. Try **inner awareness, deep meditation and meditative visualization.**"

**"Tones for removing emocon are purple and purple 2, neuron synchronization and euphoria. I suggest you start with these and incorporate them on a daily basis into your regime."**

"I diligently applied the most effective tones for **bodycon** [perps' remote motor/movement control], which are, in my experience, **chakra balancing, heart chakra and nerve regeneration.** Consider that the chakras constitute a mind-body connection, thus chakra-related tones work to remove the bodycon helices. Furthermore, the spine is heavily implicated in bodycon. The tone called nerve regeneration targets the most important nerves in bodycon, namely the spinal cord, brain stem, and the 10 nerves emerging from the brain stem."

Those were from iso-tones.com:

- For emotional control: purple, purple 2, neuron synchronization and euphoria.
- For body control: chakra balancing, heart chakra and nerve regeneration.
- For removing piezoelectric antenna generally: cell health, DNA stimulation and repair, healing, chakra balancing and ESP.
- For subconscious: inner awareness, deep meditation and meditative visualization (tones).
- For intellectual stimulation etc.: IQ increase, mental performance tones, creativity, scout and manifestation.

It may be useful to stimulate all areas for neuron-binding nanotechnology knockout.

### "Using LENS and Isochronic Tones Concurrently

"Now, let's talk more about the value of using step 1 and step 2 together. **The value of the neurofeedback therapy is that it destabilizes the helices electromagnetically to such a point that they can be removed by the vibration therapy of the isochronic tones.** The electromagnetic therapy

weakens the helices structurally and the vibrations loosen the structures, enabling them to either uncoil from the nerves or disintegrate.

“You should start using the isochronic tones even before going for your first LENS therapy session. First, make an appointment with the LENS therapist, and once that is assured, download and listen to the tones every day while waiting for the first therapy session, and over the first two weeks while the therapist is making the LENS brain map.

“However, from the third week of LENS therapy, when the therapist starts to stimulate the sites, you should give yourself a break from the tones on the day of therapy and the day after. This allows the brain to rest, which is also important, as you are, after all, turning your brain and cranial nervous system into a battlefield, by fighting the polymer helices.

“Now you must continue in this manner, alternating between the two treatments, for the first 13 weeks: **One LENS neurofeedback session per week, plus five days of listening to tones, morning and night.**

“In this time, you may experience headaches and other phenomena which are usually transient. The pain associated to the disentrainment can be controlled by regular pain medication such as acetaminophen (paracetamol). Remember that we are dealing with the nerves and that the therapy is thus not always pain-free....

“**The neurofeedback therapy is so vitally important.** If the neurofeedback therapy does not take place, the rest of the Grid Exit Method techniques will be ineffective and the subsequent steps will be lost. The electromagnetic destabilization is central to the disentrainment proceedings. However, when you detect one or more of the signs, it is time to remove the shielding and move on to part 2.”

Part 2 (Step 3: towers):

“[P]erpetrators route their RF signal through the network of terrestrial microwave towers that riddle the landscape.”

“When you come within the line of sight of the microwave tower, make a mental note of how you feel on approach to it. You will feel one of two things. The first possibility is that you will feel nothing. This is typical of people who are not entrained with the polymer helix. Or you may feel nothing because the polymer helices have not been sufficiently destabilized by the neurofeedback therapy and isochronic tone therapy. If this is the case, go back to steps 1 and 2 and continue for another week or two, before re-approaching the microwave tower.

The second possibility is that, the closer you get to the microwave tower, the more you will feel the powerful reactivity of the polymer helices in the cranium to the microwaves being emitted from the mast. Chances are excellent that, when you approach the tower, the loosened helices will start uncoiling themselves and bursting!”

“**[Y]ou can park at the microwave tower and listen to the isochronic tones at the same time, thereby doubling up on the treatment and making the disentrainment twice as effective.**”

“How often should you visit a tower? You should try to go to a tower once a day for an hour, at the least. Whenever you have extra time at your disposal, such as on weekends, spend extra time there. The more hours you spend at the tower, the more helices come off. Super-fast removal of the helices is one objective of the Grid Exit Method, so incorporate a visit to the tower into your daily routine and make time to visit. While I was at the tower, I used to keep myself busy with other things and listen to isochronic tones at the same time....”

Step 4 (cell phone or crystal):

“The crystal I have in my possession is a form of lithium crystal called **Lepidolite**. The crystal is strongly piezoelectric. When the crystal is placed anywhere on the head, it forms an overpowering air capacitive coupling with the polymer helices. The crystal introduces its own frequency into the cranium that is in direct competition

with the resident piezoelectric helices, thus destabilizing and removing them in the coupling.... The crystal should be a little smaller than the size of a tennis ball. Try to find one with flat surfaces, so that you can balance it on top of your head.”

“I have found that, at the end of disentrainment, there are polymer helices that prove to be difficult to remove. These are found mostly on the V2 nerve, above the palate, in the ‘midface’ area. Because they are above the palate, they do not receive direct stimulation from LENS neurofeedback therapy. To remove these, you must use a **combination of crystal therapy and isochronic tones**. Apply the crystal to the area of the forehead between the eyes, above the nose. **Concurrently, use the isochronic tones called neuron synchronization, mental performance and euphoria.** Euphoria is especially helpful if you have helices in the mid-face area oppressing the pleasure centers.”

Step 5 (assaults backfire):

“It’s a remarkable paradox, and certainly worth mentioning, that the perpetrators’ RF signal also turns against the polymer helices.... Provided you have correctly disentrained by visiting the LENS neurofeedback therapist, this consequence is inevitable. Each time you feel the effects of demodulation, meaning, you feel the presence of the RF signal, the polymer helices become agitated and start uncoiling from the perpetrators’ sine wave. When this happens, all you can do is sit back and let the perpetrators help you, knowing they did not plan for this in the contingencies.”

“For me, the wind-like phenomenon of demodulation gradually became less and less noticeable over the months with the departure of the helices until, at the time of writing this I can no longer feel any demodulation effects.”

**Insist on TI autopsies:** “An online memorial at Raven1.net, that no longer exists, listed the names of people, both confirmed and suspected, who have died from electronic harassment and organized stalking. In my opinion, if any of these deceased individuals are exhumed and autopsied, the presence of polymer material

if found will indicate without doubt that murder has been committed.”

By the way: **“The way forward for all parties interested in promoting responsible nanotechnology, is to ensure a blanket ban of all non-consensual in-situ polymerization in human beings.** One way to do this is to put all nanotechnology equipment on a controlled list....” Editor’s note: that can be with felonies for misrepresentation without exception. All such non-consensual use in the US appears to have entailed 4<sup>th</sup> Amendment violation (18 USC § 241–242).

**Left eye** (editor’s note: where some TIs have painful implants that respond to the “off” command with both closed eyelids pressed): “Let’s talk about the optic nerve that’s placed under pressure, which so many targeted individuals have complained about: the optic nerve of the left eye. Furthermore, in my personal experience, the last of the helices to come off, right at the end of entrainment, are those situated around and behind the left eye. In order to get rid of the final polymer helices residing in the region of the left eye, you may need to download a **custom isochronic tones at 13 Hz.** This will be your final isochronic tone and the key to final liberation from mind-control, and the agents of mind-control.”

### **Book 3**

Editor’s note”: the treasonous DoD, CIA and subsequently NSA have been maligning targets of covert torture since at latest 1952, then with the mocking name of Project Moonstruck.

(“Moonstruck describes a person who is mentally deranged or crazy; it refers to the manner in which Targeted Individuals under the influence of V2k mind-control are portrayed or perceived.”)

“Those who have read the list carefully will identify Project Moonstruck, the major electromagnetic mind-control program of 1952, as the V2k invention of Dr. Henry K Puharich. Let’s take another crucial look at the entry, to satisfy ourselves that Puharich’s invention and Project Moonstruck are one and the same:

**Project Moonstruck, 1952, CIA** (editor’s note: alternatively designated criminals in action; clowns,

idiots and aryan, not mutually exclusive designations; or US Nazi agency #1 soon matched by the Nazi Subliminal Assaults, collaborators in violating targeted individuals (TIs) in our homes 24/7, flagrantly constitution-violating, treasonous terrorist organizations, in US operations 100% dishonorable, oath-of-office transgressors, torturing and murdering targeted individuals toward depopulation with mass enslavement wherein “you will own nothing,” anti-patriotic, effectively nothing-but-neo-Nazi agencies that might as well have a single question for potential hires, presumably screened for 100% Milgram tests failure and droned or lobotomized on their day 1s to act without self-preservation instinct in subjecting themselves to capital punishment: “so how do you like them Nazis?”):

- Electronic implants in brain and teeth
- Targeting: long range
- Implanted during surgery or surreptitiously during abduction
- Frequency range: HF–ELF transceiver implants
- Purpose: tracking, mind and behavior control, conditioning, programming, covert operations (editor’s note: covert agencies’ purposes boil down to violating people, to sadism, theft, rape, torture, murder or some combination thereof, harming brains like Nazi bulls in a China teacup shop, treasonous bulls, generally full of bullshit)
- Functional basis: Electronic Stimulation of the Brain (ESB)”

That was 1952 Project Moonstruck. Its V2k assault by and connected with the US government never stopped.

“To be honest it is devastating to realize, with dawning comprehension and a crushed spirit, that the V2k and Electronic Harassment experienced by so many Targeted Individuals today is actually [a continuation of] Project Moonstruck, a bona fide mind-control program of the mighty [editor’s note: dumbass] US government.”

“I refer specifically to the utterances made by Warren S McCulloch, in which his resident intelligence [sic] agency, military intelligence [sic], would use implanted electrodes to ‘beget Fancy’. We know from the previous chapter that the term ‘fancy’ was used in 1940s psychiatry to express the concept of madness.

“It is disgusting in the extreme that the US government would proactively produce a form of synthetic institutionalized madness, give it a suitable name, and then relegate afflicted individuals as psychiatric basket cases with no further recourse; refugees of a psychiatric garbage dumpster.

“And yet, that is not all that there is to be said about this nasty invention. It is to be noted that Project Moonstruck was founded in **1952, the same year in which Henry K Puharich handed over the V2k invention to the Chief of Psychological Warfare, of the Pentagon.**”

Editor’s note: every adult who enables these programs can be legally exterminated. Like foreign counterparts, covert US has been run by damn retarded Nazis across the board. Functional retardation is not problematic in itself. Amid nothing but treasonous Nazis in positions of real power, however, it’s a bit of a problem; *100%* of domestic DoD generals enable treasonous neo-Nazis: that’s a Department of Dipshits, Dimwits, Diabolical oath-violating [expletive of choice].

“To be clear, Targeted Individuals experience the obstructive presence of psychological warfare in peace time in a civilian setting, which is even more extreme, disturbing or destructive than psychological warfare during recognized war times.

“The reason for this is that when everyone is experiencing a war, everyone understands; but when one person, alone, is experiencing wartime during peace, no one understands, effectively isolating or denying the target who is constantly ‘at war’ with an unseen V2k force that specializes in hyper-effective, ruthless, psychological warfare of a military grade.”

Editor’s note: the US government and its contractors have been perpetrating this over 70 years!

**Right after Project Moonstruck’s first year:** “Then, on 26 February 1953, an event of great significance to Targeted Individuals occurred. Puharich, the civilian, was recalled to the ranks of the military. He was sworn in as a Captain of the Medical Corps at the Army Chemical Center in Edgewood, Maryland, headquarters for the

research into chemical, radiological and bacteriological warfare of the US military."

**Are all DoD personnel exposed?** "The important question to ask in this context, is whether all military personnel, their spouses and their children, have at some time, due to their association with the military and living on-base, come into contact with R-PECVD or plasma polymerization, so that each of them are implanted with a small but potentially responsive portion of 'k' (V2k-ready), on their facial nervous systems; while their names and frequencies associated to the implanted polymer are placed on a registry...."

**No coincidence that perps message TIs to not drink:** "After I started investigating V2k, I discovered that the physical structure of polymer (short-chain polymer bonds) can be successfully weakened and dissolved by a compound in alcohol called ethanol or ethyl alcohol.... The consumption of alcohol is one of the easiest ways to get rid of V2k, although I don't advocate drinking, on its own, as being the most effective. Drinking is a chemical therapy that still needs to be augmented by mechanical, electromagnetic therapies in order to effectively remove the 'k' overall."

**Cannabis tea on scalp and face:** "Another chemical therapy that is very effective is the use of cannabis.... THC in cannabis... destroys short-chain polymers ('k') as effectively, if not more effectively, than alcohol.... I have, for example, brewed the cannabis to make cannabis tea. I would drink a half a cup of the tea and use the left-over **cooled tea to anoint my head and face, at which time the 'k' in several locations would perish.**"

Editor's note: again the "k" is piezoelectrical material for assault, chemically deposited into our faces, principally our V2 maxillary nerves, or wrapping around neurons.

"I would use cannabis on a daily basis in various forms and I suggest that you do likewise, if legally practical.... not in a recreational sense, but as therapy against the V2k polymer."

**Crystal to free arm and hand:** "My recommendation in this regard, in order to start undermining the perpetrator's efforts immediately, is to purchase the crystal, Lithium

**Lepidolite**, already mentioned in *The Truth Will Set You Free* [Book 2], in a chunk form and hold it in your hand or hands. The result of grasping the crystal in your hand will start to undo the 'Martin Effect', in which perpetrators have free reign of the Targeted Individual's hand and arm."

**To remove "k" from ear: "The ultimate solution to resolving V2k is to put a powerful piezoelectric crystal into the ear — the left ear — and wear it in the ear as long and as often as possible."** "I propose the use of a pendulum, a small, pyramid-shaped object used in dowsing. These dowsing crystals are made of superior piezoelectric materials but have a sharp point. The original pendulum must first be cut to remove the sharp tip, before it can be worn in the ear with safety and comfort." "The **hematite pendulum is first cut** and then faceted into a usable object. When modified thus, the pendulum works to get rid of the polymer on an ongoing basis, producing a steady and powerful piezoelectric impedance mismatch that causes the short-chain polymers fabricated within the ear to break down and disengage from the audio nerves."

**The "Grid Exit" method tackles piezoelectric crud:**

"The Grid Exit Method is based on three functional principles: piezoelectricity, electromagnetism and frequencies. The implanted material is piezoelectric in that it has the properties of a ceramic or crystal. The material is electromagnetic, meaning that it can interact with radio frequencies."

"Thus the Grid Exit Method is frequency-based and makes use of piezoelectric, electromagnetic and other frequencies to destroy the 'k' material, just as the perpetrators use similar electromagnetic means to fabricate their piezoelectric material upon the nervous integrations in an act of chemical vapour deposition agitated to perform as instructed, by electromagnetic means."

"In the first step, Targeted Individuals are advised to go to a LENS therapist and undergo LENS therapy for the duration of therapy. Alternatively, the Targeted Individual can hire an EEG machine and

use it at home as per the instructions, several times a week."

"In the second step, Targeted Individuals make use of Isochronic Tones, or Sine Waves (frequencies), that are freely downloadable from the Internet and listened to."

"In the third step, the Targeted Individual visits a microwave tower regularly and sits below it for a time, perhaps on a daily basis, taking advantage of the antagonistic microwave frequencies emanating from the tower that breaks down 'k'."

"In the fourth step, Targeted Individuals purchase two piezoelectric crystals, one in chunk form called **Lithium Lepidolite** and the other in a pendulum form, called **Hematite**. The chunk of Lithium Lepidolite is used to hold in the hand or place on the head or face or on the body. The modified Hematite pendulum is meant to be worn in the left ear, at the wearer's convenience."

"In the optional fifth step, the Targeted Individual is... to consume alcohol in a limited and responsible manner, and partake of cannabis, where legally available and advisable, as two forms of chemical therapy that complement the other electromagnetic and piezoelectric therapies recommended."

"I have found that a mix of all the above therapies work best, in which a Targeted Individual incorporates all, or as many of, the steps outlined above, into a daily routine. In practice, The Grid Exit Method puts steady pressure on the perpetrators and their polymer infrastructure, so be prepared to follow the steps every day, for one year to several years."

"Mind-control, voice-to-skull, V2k, vehicular accidents and the like: what an indescribable mess. What carnage of a violence-mongering, wrecking-ball nature! Project Moonstruck and her subsequent mind-control offspring programs; institutionalized psychological warfare against... civilians with no defence: incorrigibly **depraved and unforgivable.**"

**"How irresponsible of US military intelligence [sic] and indescribably abusive of the civilians they are**

**sworn to protect. How arrogant of the Pentagon, the CIA, the Navy, the Air Force and the National Security Agency, for treating V2k victims like V2k does not exist!” “It is to be said that the US government has trashed all moral consciousness in the execution of V2k mind-control; that the repulsive invention annihilates all that is good, decent and of upstanding and moral calibre.”**

Editor’s note: it’s enabled by the US DoD and every major covert agency in the country, morally vacuous, systemically treasonous, abhorrent since importation of Nazis to run the country in Project Paperclip (after CIA’s predecessor killed General Patton amid World War II: a country since run by Nazis, amalgamating with masons mismanaging (MM: 33 on side) the US since inception).

Among her policy suggestions:

“Our first demand is a very simple one: that **Targeted Individuals be immediately acknowledged as victims of Project Moonstruck** (editor’s note: and its string of successors).

“Our second demand is that the US government acknowledges the fact that the V2k invention and Project Moonstruck has gone rogue, and is attractive and **available to criminals** (editor’s note: beside primary criminals from the NSA, CIA, USAF, balance of DoD and its leading contractors).

“Our third demand is that Targeted Individuals be acknowledged as victims of military-grade psychological warfare and accorded the necessary respect.

“Our fourth demand is another simple one: that **Targeted Individuals no longer be diagnosed by the psychiatric profession as schizophrenics** (editor’s note: a term apparently manufactured to malign targets of covert torture; all quacks knowingly using it as such can be prosecuted for execution, having joined a conspiracy against constitutional rights incorporating aggravated sexual abuse, attempts to kill and resulting deaths).

“Our fifth demand is that the **judiciary be sensitized to the existence of Project Moonstruck** and that Targeted Individuals are recognized before the law....

“Our sixth demand of the US government is that the use of V2k within any of its organizations... be immediately terminated and purged, never to be resumed again.

“Our final demand is that **Project Moonstruck and the rest of the so-called Major Electronic Mind-Control Projects be declassified.**”

Editor’s note: — declassify these now, **all** of them, these neo-Nazi operations, *never* for national security, principally including:

- **US Air Force’s** spray following targeted individuals daily and nightly, lab-tested to include carcinogenic chromium and neurotoxic barium, facilitating electromagnetic assault: **TREASON** in conjunction with flat-out treasonous NORAD, USNORTHCOM, NSA, CIA and DoD contractors colluding in poisoning the populace for unilateral war on civilians;
- **NSA’s** religious bullshit, intentionally sleep-depriving, isolating and destroying lives while playing Jesus/God in dreams, voices and signs to targeted individuals omnipresently exhausted, sexually abused by NSA personnel, violated in the most personal ways, generally with phones destroyed and communications sabotaged, and subjected to incessant cognitive interference by high-pitched, loud-as-hell subliminal messaging from the treasonous Nazi Subliminal Assailants, by last century with technology to remedy every major problem in this country, instead choosing to be nothing but neo-Nazis, 100% in support of torture, rape and murder of civilians selected for perverts, intellectual property theft or criminal profits otherwise, conducting its constitution-shredding life destruction among “behavior modification” programs that may serve to modify everyone’s behavior into legally, absolutely annihilating the NSA;
- **CIA’s** “SATAN” bullshit (silent assassination through adaptive neurons or neural networks), running suicide scripts and attempts to induce anger in destroying lives by covert torture while

playing 100% dicks in 100% of days and nights, tying with NSA’s for the most malignant animals who have ever lived, turning homes into “slow-kill” concentration camps with chemical gassing and burning by directed energy weapons and frequencies resonating with implanted, inhaled, injected or chemically deposited piezoelectric or metallic material (because: absolute Nazis); and

- **DARPA’s** malicious BCI (brain-computer interface), intentionally destroying lives period, because everyone in or connected with DARPA non-consensual BCI is a constitution-shredding sociopath;
- in all aforementioned bulleted cases reflecting programs designed by effectively Nazi 3-year-olds, deranged, deficient, demented, treasonous excrement incarnate. To the objectors: okay, in some cases like Nazi 2-year-olds.
- Then there are the military and “security” contractors’ neo-Nazi life destruction programs by covert assaults, including in TIs’ homes and workplaces. They hinge on the full support of the treasonous covert agencies and militaries running these programs principally, with and protected by the criminal FBI, DHS, police and counterparts in all major countries (not enemies: collaborators in crimes toward mass slavery).

“We also have further demands regarding R-PECVD and polymer sciences:

“We demand that university faculties with a focus on polymer sciences and engineering be placed under immediate scrutiny and alumni and present students be put on a watch-list for potentially unethical conduct....

“We demand that any **nanotechnology or micro-technology machines in commercial life be regulated on a highly controlled list** with immediate effect.

“We demand that **all unregulated, privately-owned micro-technology machines be immediately deemed illegal and predatory....**”

To the author, pseudonymous Electric Angel: thank you.
